## The slurry walls of life

As horrific as 9/11 was, it could've been even worse if not for a 30-year-old engineering feat. Reaching some 70 feet underground, a 3-foot-thick concrete structure called a "slurry wall" surrounded the base of the World Trade Center complex. Designed to prevent the Hudson River from flooding the basement, this wall prevented New York's subway system from flooding and countless additional people from dying on September 11, 2001.

A slurry wall is constructed by pouring a thick, goopy mixture of powdered clay and water into a deep, narrow trench. The solution coats the sides, preventing water and soil from collapsing the trench. Pipes are then inserted through the slurry, and concrete is pumped into the trench, pushing the slurry up and out. At the WTC, the concrete formed such a strong wall that even two airplanes and the falling towers didn't fracture it. Part of the slurry wall still stands at the 9/11 Memorial site, a symbol of resilience.

Sometimes God uses life's "slurry" to make us stronger than we ever thought possible. We might wish something yucky hadn't happened — until we discover it was part of what sustained us, making us resilient and enabling us to rise out of destruction and death to awe-inspiring new life.
